Application/Control Number: 10/757,489

Art Unit: 2673

Election/Restrictions

1. This application contains claims directed to the following patentably distinct species of the claimed invention:

First Embodiment Claims 1-19 (invention towards detection circuitry associated with the arrangement for detecting signals at same sensing conductors arising from the position detection of a first kind and signals arising from the position detection of a second kind.

Second Embodiment Claims 20-38 (invention towards a patterned arrangement of sensing conductors extending into the sensor and a source of oscillating electrical energy at a predetermined frequency and detection circuitry for detecting a capacitive influence on the at least one sensing conductor when the oscillating electrical energy is applied.

Third Embodiment claims 39-44 (invention towards providing an oscillating signal at a predetermined frequency and measuring the conductors for capacitive effects on the conductors due to touch thereon.

Fourth Embodiment claims 45,46 (invention towards providing an oscillation signal source and embedding a grid of transparent conductors within at least one transparent foil, placing the transparent foil over the electronic display screen and providing detection circuitry for detecting capacitive effects on the conductors.

Fifth Embodiment Claim 47 (invention toward a sensor having at least one sensing conductive element, an oscillator for providing an oscillation signal, a transmitter associated with the oscillator for transmitting the oscillation signal in the

Application/Control Number: 10/757,489

Art Unit: 2673

vicinity of the sensor and sensing circuitry for sensing a signal at the at least one sensing conductive element induced by a touch of conductive object subjected to the transmitted oscillated signal.

Sixth Embodiment Claim 48 (invention towards a detection circuitry for detecting the oscillation signal when transferred via the junctions to conductors in the second sense, the transference being indicative of capacitive coupling induced by a touch of conductive object touching the sensor at a respective junction.

Seventh Embodiment Claim 49 (invention towards an oscillator for providing an oscillation signal, the oscillation signal being applied to at least part of the apparatus including the at least one sensing conductive element and detection circuitry for detecting a.c. grounding of the at least one sensing conductive element due to a capacitive connection to a conductive object touching the sensor.

2. Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, No claim is generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include

Application/Control Number: 10/757,489

Art Unit: 2673

all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

Conclusion

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Nitin Patel whose telephone number is 571-272-7677. The examiner can normally be reached on 8:00-5:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Bipin H Shalwala can be reached on 571-272-7681. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.
